SYSTEMS

THE INFINITY 2020

perimeter intrusion detection system turns your fence into an active part of your security system. Before an intruder sets foot onto your property, you are alerted to their presence, allowing for a preventative response.

Since 1987, Integrated Security Corporation has provided the first line of defense at some of America's most critical locations, protecting against attacks at airports, commuter rail facilities, military bases, and prisons. Backed by unsurpassed technology, ISC is the chosen security system for

ISC HAS PROVIDED THE FIRST LINE OF DEFENSE AT SOME OF AMERICA'S MOST CRITICAL LOCATIONS.

refineries, nuclear power plants, dams, chemical plants, and electrical distribution sites.

Vulnerable locations require first-rate perimeter systems from a trusted source. From consultation, planning, and engineering to complete installation and user training, ISC is your single source for the most dependable perimeter security system available. Our state-of-the-art user-friendly perimeter security products are

A FENCE ALONE MAY NOT PROVIDE YOU WITH THE LEVEL OF PROTECTION YOU REQUIRE.

designed for maximum protection and reliability. We also provide unsurpassed technical support for years of trouble-free operation, and we offer the industry's

INFINITY SYSTEMS HAVE THE LOWEST FALSE ALARM RATE IN THE INDUSTRY.

first three-year warranty. ISC understands that your perimeter intrusion detection system needs to be a welcome asset for your security personnel. We give you a system that accurately detects intruders while minimizing false alarms. Infinity systems have the lowest false alarm rate in the industry with practically no nuisance alarms.

The Infinity 2020 protects your bottom line as efficiently as it protects your fence line. After the three-year warranty, there are no annual maintenance requirements for the system, saving you time and money far into the future. Even installation of the Infinity

THE INFINITY 2020 IS A "SET IT AND FORGET IT" SYSTEM.

2020 is economical and simple because there are no electrical components on the fence.

The Infinity 2020 is a "set it and forget it" system. Once installed, there is virtually nothing that needs to be done to keep the system operating properly. Since there are no fence tension specifications, your fence will not need to be regularly adjusted. The Infinity 2020 also works on fences that are a challenge for other systems. If your cable is damaged, our sensor cable can be spliced easily and quickly. There will be no loss of system performance,

OUR SENSORS CAN BE MOUNTED ON ALMOST ANY SURFACE, INCLUDING CHAIN LINK AND WELDED MESH FENCING, RAZOR RIBBON, BARBED WIRE, AND CONCRETE WALLS.

and no need to call a costly fiber optic technician or replace a long piece of cable.

The Infinity 2020 system detects external vibrations from cutting or climbing the fence using a sensor placed on each fence panel and the most up-to-date electronics in our processor. The weather station provides the Infinity 2020 system with real-time environmental data for immediate adjustments in any weather conditions.

All moving parts in our sensor are gold plated to military specifications, insuring a non-corrosive, highly sensitive mechanism. Enclosure in a durable, molded sensor body provides the capability to withstand extreme environmental conditions. ISC systems have been successfully installed in frigid Alaskan winter climates as well as the scorching Arizona desert. Additionally, our sensors can be mounted on almost any surface, including chain link and welded mesh fencing, razor

ribbon, barbed wire, and concrete walls. The Infinity 2020 will work on slide gates, concertina wire, decorative fences and poorly tensioned fences. We have even installed our sensor cable to protect above ceilings and in air vents. This versatility also reduces cost by eliminating other external devices around sally ports.

Our sensor cable is grounded and shielded with no electronics on the fence line. This insulates the

THE INFINITY 2020, WITH ITS EXCEPTIONAL PERFORMANCE, IS THE CHOSEN SYSTEM AT OVER 100 POWER PLANTS AND SUBSTATIONS.

system from electrical interference and lightning strikes. To further protect against lightning, we have DC surge suppression integrated into our sensor interface board. That's why the Infinity 2020, with its exceptional performance, is the

chosen system at over 100 power plants and substations around the country.
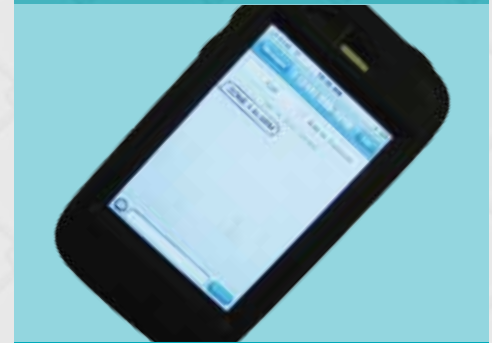

The Infinity 2020 system offers two types of the latest browser based software. You can choose from our customized complete head-end software, or use our maintenance software in

> **THE CLEAR AND CONCISE GRAPHICS OF OUR HEAD-END SOFTWARE PROVIDE OPERATORS THE INFORMATION THEY NEED TO QUICKLY RESPOND TO ALARMS.**

conjunction with your existing hardware and systems. The clear and concise graphics of our head-end software provide operators the information they need to quickly respond to alarms. Security can be set for individual users to have separate access to functions. A number of history reports are provided, including alarms by zone for a range of dates. Your system administrator can easily disarm zones, such as a gate that is occasionally opened. A system calendar can be set to automatically disarm gates during open hours, and then re-arm them at the time they are to be locked for the night. You can even adjust sensitivity for local conditions, such as zones with rigid fencing and others that are loose. With the Infinity 2020, you never have to live with "one size fits all."

Already protecting thousands of lives, as well as billions of dollars in assets, Infinity 2020 has demonstrated exceptional performance, years of system reliability for our many customers and versatility across a wide range of applications. Make the Infinity 2020 *your* first line of defense.
